

RGPBALLS[®]

BALL TRANSFER UNITS

www.rgpballs.com

Welcome

COMPANY PROFILE

WELCOME TO OUR WORLD: PRECISION.

For over fifty years, we have been among Europe's leading companies in the manufacturing, trading and distribution of precision balls, rollers and ball transfer units.

WE MOVE MOUNTAINS TO GET THE DETAILS PERFECT

Over 70 people working together since long time in our headquarter in Cinisello Balsamo: at Rgpballs we have about 10,000 m² of know-how and expertise. We consistently work on innovations to stay at the forefront. With us, everything is about quality.

CHOOSING RGPBALLS® MEANS CHOOSING EXPERTISE, ...

Nothing says more than time. We have over 50 years of efforts, breakthroughs, and expertise under our belts. And we keep improving everyday.

METHOD, ...

Science pushes us far, a consultative spirit keeps us close to your needs. And this is how we manage to handle the broadest range of inquiries.

SPEED.

Time is valuable, exactly like our warehouse.

Indeed, more stock available means less time needed to satisfy any demand.

AN "EVERYTHING, RIGHT NOW" WAREHOUSE.

You also know that in an ever-changing business, speed is competitiveness.

Our warehouse is a valuable resource with more than 5,000 tons of products regularly in stock.

We can guarantee prompt delivery for most of our customers' needs worldwide.

WE HAVE MORE THAN 3,000 CUSTOMERS ALL AROUND THE WORLD, AND WE SPEAK THEIR LANGUAGES.

Our catalogue is international; wherever you are, you can select our products and consult with our experts, without worrying about physical or language barriers.

Our team can speak all major languages: Italian, German, English, French, Spanish, Ukrainian, Russian, Chinese, and Romanian.

A FAMILY BUSINESS.

We are a company that is also a big family. You won't find any board of directors with us, only the passion we put into each and every challenge. Our business is so stable that after 50 years we are still here, with all the professionalism of an international business.

CERTIFICATION:

CERTIFICATION FOR MANAGEMENT SYSTEMS:

ISO 9001:2015 – ISO 14001:2015 – ISO 45001:2018

PRODUCT CERTIFICATION ACCORDING TO TUV-PROFICERT PROCEDURES

APPLICATIONS

RGPBALLS® BALL TRANSFER UNITS

They are used in a vast number of applications.

Whether you are a small company or a multinational one, we are by your side to make your job easier and your applications more performing. A few of the most common include:

Airport loading and unloading equipment

Sheet metal processing machinery

Hydraulic presses

Sliding guides

Elevating platforms and equipment

Mechanical conveyors

Marble and ceramic processing machinery

Transport trolleys

Pallet and container racks

Movable walls

Sliding gates

Sliding doors and windows

Equipment for robotics, electronics and general automation

Car stands

HOW TO SELECT THE CORRECT PRODUCT FIRST OBSERVATIONS

ASPECTS TO BE EVALUATED

- **Position and assembly of the component:** the product can be assembled with the load ball facing upwards, downwards or according to the type of use required.
- **Working temperature:** depending on what type of material they are made of, the balls can react to loads in different ways.
- **Working environment:** different contaminating factors (dirt, dust, humidity etc.) can influence the yield of the product.
- **Load** (size, hardness, surface, stability etc.) to which the product will be subjected.
- **Additional aspects such as speed, frequency and duration** of the loads handled.

POSITIONING

Fixing and positioning are performed with the usual insertion in pre-established holes or resting on the base, by means of screws and rivets in the versions with fixing holes or through internal or external threads. Two versions of fixing rings in fixed or removable types are available for locking in the seats. We also have a special a version (called SPM-R) with a predetermined height groove for the insertion of the fixing rings according to DIN 471, which allows the locking in holes made on support surfaces of variable thickness. On request it is possible to make this groove at different heights and on different types of transfer balls.

LAYOUT

Usually ball transfer units are used with three layouts:

CONSTRUCTION

RGPBALLS® ball transfer units are multidirectional systems for the linear handling of loads.

They consist of a large ball that rolls on a defined quantity of small diameter balls, all enclosed in a hemispherical seat.

Thanks to the care with which the various components are processed, friction is particularly low, thus allowing the strength required to move the loads to be significantly reduced.

The production range starts with a main ball of 12 mm diameter up to a maximum of 90 mm, which can be made of different types of materials such as steel, stainless steel, pressed metal sheet and plastic materials. Among the versions made, different types of coatings are also available, which are useful to preserve oxidation resistance over time.

Even the balls used can be chosen from different types of materials according to the final application. All components can be assembled in different materials, to meet any specific final use.

RGPBALLS® mainly produces two “families” of ball transfer units:

- **Hardened machined steel housing (turned from bar):** - they are normally used to handle heavy loads, strong stresses, impacts and severe conditions in general. For high flow rates, similar versions are available specifically designed for these applications.
- **Pressed metal sheet components:** - they are instead preferable in applications which involve lower loads. They combine good smoothness at adequate flow rates, allowing a cheaper final price.
- **with plastic material components** - suitable for the chemical, pharmaceutical and food industries as they comply with EC 10/2011, NSF/ANSI 51 food certifications. They also provide excellent dielectric and insulating properties and are not gas permeable.

Many versions feature a felt seal that helps keep the major ball clean when rotating, thus preventing impurities from coming into contact with the recirculating balls. They usually have one or more drain holes on the bottom to facilitate the escape of impurities, liquids, condensation, etc.

They are normally supplied pre-lubricated to facilitate their conservation if not used. They do not require lubrications, even periodically applied. For particularly critical conditions of use with the presence of dirt, it is advisable to provide cleaning by applying a common release / lubricant such as WD-40.

CONDITIONS OF USE AND TECHNICAL DATA

RGPBALLS® ball transfer units can be positioned in any orientation. If the positioning is different from the conventional one (with the main ball facing upwards), we have to expect a lower performance in terms of scope and smoothness.

Some versions intended for specific applications, on the other hand, are suitable for conventional use only. Technical sheets of each version show an indication of the flow rates according to the position of use.

The temperature of use is normally included between -20 ° C to +100 ° C (+70 ° C continuously and +100 ° C intermittent). These values do not affect the correct functioning of the units. They can even reach temperatures up to +150/200 ° C by eliminating the internal dust seal.

For a high temperature use we usually suggest our version with all components made of AISI 420 stainless steel, without felt seal.

We can find the right type and calculate the extent of the load to be placed on each single unit by dividing by 3 the total weight of the load to be moved. The resulting number represents the highest weight that each unit is able to bear.

It is necessary to check that the support surface is sufficiently rigid and aligned so that all units which simultaneously support the load are subjected to the same expected stress. Likewise check that the surface of the load to be moved is rigid enough to prevent the units from plowing it. However, consider an appropriate safety margin.

To determine the distance between the units it is necessary to divide by 2.5 the horizontal side of shorter length of the load.

For example, for a slab of 700x1000 mm, the distance (D) will be 280 mm (700: 2.5). This is the space needed between one unit and the other, and it ensures that on the minimum length of the support there are enough units to support the load.

Example 1

Total load = 150 Kg

Force exerted on the spheres (F) $F = \frac{1470 \text{ N}}{3} = 490 \text{ N}$

Load on single ball = 50 KG

Example 2

Surface of the transported object = 700 × 1000 mm

Distance (D) of the spheres $D = \frac{700 \text{ mm}}{2,5} = 280 \text{ mm}$

BALL TRANSFER UNITS

PAGE

“SPM” SERIES – HEAVY DUTY TYPE WITH FLANGE

11-12

Hardened machined steel housing with flange, turned steel cover, felt seal*, drain hole on the bottom. Available in steel, zinc plated steel, stainless steel. Balls in chrome steel, stainless steel AISI 420, plastic material.

* Except SPM 12, 15 and versions with plastic ball.

“SPM” SERIES – HEAVY DUTY TYPE WITH FLANGE – SEEGER GROOVE ACCORDING TO DIN 471

13

Hardened machined steel housing with flange, groove for fixing ring, turned steel cover, felt seal*, drain hole on the bottom. Available in steel, zinc plated steel, stainless steel. Balls in chrome steel, stainless steel AISI 420, plastic material.

* Except SPM 15 and versions with plastic ball.

“SBM” SERIES – HEAVY DUTY TYPE WITHOUT FLANGE

14

Hardened machined steel housing without flange, turned steel cover, felt seal*. Available in steel, zinc plated steel, stainless steel. Balls in chrome steel, stainless steel AISI420, plastic material.

* Except SBM 8, 12, 15 and versions with plastic ball.

“SPM CARGO” SERIES - FOR AIRPORT USE, DEPOSITS, FREIGHT FORWARDERS FOOTBOARDS

15

Hardened machined steel housing with flange, turned steel cover, without felt seal to ensure better smoothness and less friction. Stainless steel plate with several holes on the bottom to facilitate the escape of liquids, condensation and impurities. Available in zinc plated steel with sealing coating to increase corrosion resistance, and in stainless steel. Balls in stainless steel AISI 420.

BALL TRANSFER UNITS

PAGE

“SPM-SBM SUPER HEAVY DUTY” SERIES – FOR HIGH LOADS

16

High-performance machined, case-hardened and hardened steel housing.
Removable turned steel cover*, felt seal, drain hole on the bottom.
Available in steel, zinc plated steel, stainless steel. Balls in chrome steel and stainless steel AISI 420.

* Except SPM 60.

HEAVY-DUTY "SBM-SPM" SERIES WITH THREADED STUDS

17

Hardened machined steel housing, threaded nut machined from solid*, cover in turned steel, no felt seal to ensure better smoothness. Available in steel, zinc plated steel, stainless steel. Balls in chrome steel, 420 stainless steel, plastic material.

* Standard size M8 x 15/20 mm. Available in other sizes upon request.

HEAVY-DUTY SBM SERIES WITH INTERNAL THREADS

18

Turned, hardened steel flangeless housing
Bottom internal thread for fastening by screws or threaded rods.
Turned steel lid.
Felt gasket.*
Available in steel, galvanized steel, stainless steel.
Balls in chrome steel, AISI 420 stainless steel, plastic material.

* Except SBM 12, 15 and versions with plastic balls.

“SPM” SERIES – HEAVY DUTY TYPE WITH SPRING ELEMENT

19

External housing in turned, burnished steel. Internal unit all made of machined, hardened and zinc plated steel. Felt seal. Internal spiral spring. Available in burnished steel, stainless steel. Balls in chrome steel, AISI420 stainless steel. Fully removable.

BALL TRANSFER UNITS

PAGE

“SPP” SERIES – ALL PLASTIC MATERIAL

20-21

Housing and cover in POM (acetal resin) turned from solid, no felt seal to ensure better smoothness, drain hole on the bottom.
Plastic or AISI316 stainless steel balls.

“SPS” SERIES – LIGHT DUTY TYPE

22

Zinc plated pressed metal sheet metal housing and cover*, inner shell in hardened pressed steel*, felt seal**.
Balls in chrome steel, AISI420 stainless steel, plastic material.

* Available completely in stainless steel version.

** Except SPS 15 and versions with plastic ball.

“SPS DV” TYPE IN PRESSED METAL SHEET WITH FIXING HOLES

23

Housing in hardened and zinc plated pressed metal sheet.
Holes on the flange for fixing by means of screws or rivets.
Without felt sealing system to guarantee a better fluency.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

Made in Italy - All products shown in this catalogue are *Made in Italy*.

"SPM" SERIES – HEAVY DUTY TYPE WITH FLANGE

SPM 12/15

SPM 22/25

SPM 30/45

- Hardened housing with flange machined from bar, in order to guarantee high flow rates and a greater resistance to stress.
- Reinforced cover in turned steel.
- Felt seal (except for SPM 12 and 15).
- Drain hole on the bottom.

"SPM" SERIES – HEAVY DUTY TYPE WITH FLANGE AND MAIN PLASTIC BALL

SPM 12/15

SPM 22/25

SPM 30/45

- Hardened housing with flange machined from bar, in order to guarantee high flow rates and a greater resistance to stress.
- Reinforced cover in turned steel.
- Drain hole on the bottom.
- Versions with main plastic ball:
 - best choice for handling particularly delicate surfaces such as sheets of glass or crystal, wooden panels, painted or satin sheet plates, and so on*
 - felt seal to ensure maximum smoothness even in the presence of light loads
 - usually not to be used turned upside down*
 - working temperature 0°/60°*

- Hardened housing with flange machined from bar, in order to guarantee high flow rates and a greater resistance to stress.
- Seeger groove on the housing for the insertion of fixing rings according to DIN 471 standards*
- Reinforced cover in turned steel.
- Felt seal (except for SPM 15).
- Drain hole on the bottom.
- All listed versions can also be produced with main plastic ball

* Groove can be made on request with different dimensions and heights.

“SBM” SERIES – HEAVY DUTY TYPE WITHOUT FLANGE

SBM 8

SBM 12

SBM 15/22/30/45

- Hardened machined steel housing without flange.
- Turned steel cover.
- To be used in applications which require to minimize the protrusion from the housing seat.
In order to ensure good smoothness even under limited loads, SBM 12, 15 and all versions with main plastic ball are assembled without felt seal.
- Drain hole on the bottom.
- Working temperature for main plastic ball versions: 0°/60°*

“SPM CARGO” SERIES - FOR AIRPORT USE, DEPOSITS, FREIGHT FORWARDERS FOOTBOARDS

- Hardened housing with flange machined from bar, in order to guarantee high flow rates and a greater resistance to stress.
- Particularly suitable for use in airport systems, depots, platforms for shippers ecc.
- Trivalent zinc plating to offer greater resistance to corrosion.
- Reinforced cover in turned steel.
- No felt seal, in order to offer maximum smoothness in all conditions of use.
- Stainless steel disc with 7 drain holes on the bottom to facilitate the escape of condensate, dust, impurities.

“SPM-SBM SUPER HEAVY DUTY” SERIES – FOR HIGH LOADS

- High-performance machined, case-hardened and hardened steel housing.
- It can withstand high loads and features greater resistance to stress.
- Reinforced cover in turned steel (can be removed for maintenance, except for SPM 60).
- Felt seal.
- Drain hole on the bottom.

“SPM-SBM” SERIES – HEAVY DUTY TYPE WITH THREADED NUT

SBM 8 FL

SBM 12 FL

SBM 15 FL

SPM 15 FL

- Hardened housing machined from bar.
- Threaded nut machined from solid (available in different diameters / lengths).
- No felt seal to ensure better smoothness even with low loads.
- Versions with main plastic ball:
 - best choice for handling particularly delicate surfaces such as sheets of glass or crystal, wooden panels, painted or satin sheet plates, and so on*
 - usually not to be used turned upside down*
 - working temperature 0°/60°*

“SPM-SBM” SERIES – HEAVY DUTY TYPE WITH INTERNAL THREAD

- Hardened machined steel housing without flange.
- Turned steel cover.
- To be used in applications which require to minimize the protrusion from the housing seat.
- In order to ensure good smoothness even under limited loads, SBM 12, 15 and all versions with main plastic ball are assembled without felt seal.
- The threaded hole at the bottom allows a strong fixing in all conditions of use.
- Working temperature for main plastic ball versions: 0°/60°*

“SPM” SERIES – HEAVY DUTY TYPE WITH SPRING ELEMENT

- External housing in turned, burnished steel
- It guarantees solidity and maintains its features over time, avoiding the typical bending of the pressed metal sheet.
- Internal unit all made of machined, hardened and zinc plated steel.
- Felt seal and drain hole on the bottom.
- Hardened and ground internal spiral spring.
- The fixing ring provided to lock the ball transfer unit can be removed for any maintenance and / or replacement of the internal spring.

ITEM	TYPE	VERSION	DIMENSIONS						STROKE mm	DYNAMIC LOAD Kg.	MAXIMUM STATIC LOAD*		WEIGHT (Kg)
			dw	D	D1	h	H	b				Kg.

* Attention: the maximum static load indicates the complete compression of the ball

“SPP” SERIES – ALL PLASTIC MATERIAL

SPP 15

SPP 22

SPP 30/45

- Housing with flange all made of POM (acetal resin) turned from solid.
- No felt seal, in order to ensure better smoothness even with low loads and to prevent liquids absorption.
- Drain hole on the bottom.
- Salt water and chemicals-resistant.
- Non-magnetic, they do not conduct electricity.
- Suitable for chemical, pharmaceutical, medical applications and so on.
- All listed versions can also be produced with a groove for inserting a fixing ring according to DIN 471.
- Working temperature 0°/60°.

STRENGTHS OF THE MATERIAL USED

- High resistance to stress and efforts over time.
- Excellent dimensional stability.
- Low friction coefficient.
- High compressive strength and impact resistance even at low temperatures.
- High chemical resistance to solvents, fuels and strong alkalis; high resistance to thermal and oxidative degradation.
- Excellent workability on machine tools, it is often used for automatic machines.
- Food certifications EC 10/2011, NSF/ANSI 51, even when colored.
- Good dielectric and insulating properties.
- Not permeable to gases, no microporosity.
- Natural white color; on request also red, blue, green, yellow, orange.

SIGNIFICANT ASPECTS

- It has a lower abrasion resistance compared to PA6, especially in dirty and dusty environments.
- It does not resist to concentrated acids.

Please note: all versions can be provided without flange (see SBM drawing hereunder)

“SPS” SERIES – LIGHT DUTY TYPE

SPS 15

SPS 22/30

- Dimensionally interchangeable with the SPM version, they guarantee good smoothness and greater lightness at low costs.
- Housing and cover in pressed metal sheet.
- Inner shell in hardened pressed steel.
- Felt seal (except for SPS 12 and 15).
- Drain hole at the bottom (except for SPS 22 SS)
- Versions with main plastic ball:
 - Best choice for handling particularly delicate surfaces such as sheets of glass or crystal, wooden panels, painted or satin sheet plates, and so on;*
 - No felt seal to ensure better smoothness even with low loads;*
 - Usually not to be used turned upside down.*

“SPS DV” PRESSED METAL SHEET TYPE WITH FIXING HOLES

- Housing in hardened and zinc plated pressed metal sheet.
- Two holes on the flange for fixing by means of screws or rivets.
- To guarantee a better fluency, the felt sealing system is not present.
- Version with the big ball made of plastic material:
 - is particularly suitable to handle gentle surfaces as glass or crystal sheets, wood panels, painted or glazed pressed metal sheets, and so on;*
 - working temperatures 0°/60°.*
- Drain hole at the bottom

SPECIAL UNITS CUSTOM MADE

Upon request, we can provide other kinds of ball transfer units made to measure to meet your needs for the widest variety of uses and applications.

Our technical department is available to assess the feasibility of various types to satisfy the user's demands and, if necessary, assist the Customer in choosing the correct ball transfer units to use.

Made-to-measure ball transfer units.

Completely custom, designed with you to provide your applications with maximum performance.
