<sup>1)</sup>Rated dc link current for dimensioning an external DC connection

 $^{\rm 2)} Rated output of a typical standard asynchronous motor at 400 V 3 AC$ 

<sup>3)</sup>200 A possible with reinforced DC link bridges (accessory).

<sup>4)</sup>If, when connecting several Line Modules and Motor Modules in series, the current carrying capacity exceeds 20 A, another 24 V DC connection is required using a 24 V terminal adapter (max. connectable cross-section 6 mm2, max. protection 20 A).

<sup>5)</sup>With rated output current (max. output frequency 1300 Hz at a current controller cycle of 62.5 µs, pulse frequency 8 kHz, 60 % permissible output current). Observe the dependency between max. output frequency and current derating. At present, the output frequency is limited to 550 Hz, the values stated apply with the high output frequency license.

<sup>6)</sup>Observe the dependency between max. output frequency and current derating. At present, the output frequency is limited to 550 Hz, the values stated apply with the high output frequency license.

<sup>7)</sup>Observe the dependency between max. output frequency and current derating.

<sup>8)</sup>Power units with intensified air cooling thanks to integrated fan

<sup>9)</sup>Power loss of the Motor Module with rated power including losses of the 24 V DC electronics power supply
